

## **RC LOGGER GUIDELINES ON SHIPMENT OF LITHIUM (LI-ION) AND LI-METAL BATTERIES**

As a mandatory compliance with the changes to the provisions on the air transport of lithium/li-metal batteries made by the International Air Transport Association (IATA) effective April 1, 2016, please be guided accordingly of the following restrictions for adherence:

- 1) Since lithium/li-metal batteries fall under the category of "International Dangerous Goods" (IDG), they can only be delivered to a number of approved countries of destination due to courier service limitation (Examples: via cargo aircrafts only, no more passenger aircrafts allowed; restrictive government regulation).
- 2) Orders placed inadvertently for prohibited destination countries are considered 'cancelled" and will be refunded since they will fall automatically under the category of 'undeliverable goods".
- 3) Deliveries in USA: For batteries that are available for delivery locally (except Hawaii and outlying island territories), the normal rate will prevail.

However, please be aware that some batteries are available only for delivery through our HK warehouse. In cases like this, Guideline no. 4 will prevail and **additional surcharge will be imposed** even though the delivery address is stateside. As an alternative, you may consider ordering your RC Logger battery needs at our Amazon online shop. (Amazon shop: click [HERE](#))

- 4) Deliveries in Countries other than USA: Orders for more than 15 stand-alone lithium/li-metal batteries (not categorized as packed with equipment and/or installed in equipment), should be placed online separately from all the other items being ordered, if any.

The batteries will need to be split-shipped strictly into maximum of 15pcs a day delivery (Example: Order of 20pcs will be sent: Day 1: 15pcs and Day 2: 5pc).

Please note that as a result, **additional surcharge will be incurred (approximately from USD60.35 to USD312.37)**. Batteries however are also available at our worldwide distributors as a cheaper alternative source. (Find our distributors: click [HERE](#))

These guidelines will be updated from time-to-time to accommodate further changes/additions in the provisions as set by the regulating agencies involved in worldwide transport regulations.
